Start the Server — Reads from — **shared_files**

Start the Server — Writes... — **sliced_files**

Start the Service_Anouncer

sliced_files

advertised_file.json

Start Service_Listener

Stop Service_Listener

content_dict.json

Start Downloader

Since content_dict.json is a file and not a folder, unlike sliced_files, it can't be written to and read from at the same time. This is the reason for stopping Service_Listener.py before starting Downloader.py

The Code has been tested in Pop OS, Windows, MacOS. (Unreliable on windows)
